## **Prime Focus' BRAHMA AI To Collaborate With Google Cloud To Scale High-Fidelity, Interactive Digital Humans for Global Enterprises**

Mumbai - March 11, 2026

[BRAHMA AI](#), an enterprise AI content platform backed by [Prime Focus Limited](#), and [Google Cloud](#), have announced a multi-year strategic partnership to enable high-fidelity, multilingual, interactive communication via digital humans that bridge the gap between organizations and their global audiences.

Google Cloud will partner with BRAHMA AI to advance its innovation and product lifecycle journey. The combination of Google Cloud's secure, scalable AI infrastructure and generative AI models with BRAHMA AI's industry-leading enterprise AI content platform can deliver movie-quality, interactive digital humans, or ATMANS. These are hyper-personalized digital likenesses, with multilingual audio generated through VAANI in [BRAHMA AI Studio](#), and leveraging [BRAHMA AI Core](#), an enterprise-grade data platform, making information more accessible and relatable for audiences in any language.

Speaking about the collaboration, BRAHMA AI CEO Prabhu Narasimhan said, "Artificial intelligence is fundamentally changing how organisations create and deliver content. BRAHMA AI was built as an end-to-end enterprise platform to help organisations create, manage and scale AI content across languages and global markets. From day one, we designed the platform around a strong architectural foundation of ethics, security and digital identity governance so enterprises can innovate while protecting identity, rights and intellectual property.

Our collaboration with Google Cloud validates our industry-leading AI tools, allowing us to take our high-fidelity, movie-grade digital humans (ATMAN) and make them truly interactive using Google Cloud's generative AI models. It also accelerates enterprise adoption and enables organisations across media and entertainment, sports, healthcare, advertising, and global consumer brands to deploy secure AI-driven workflows at scale, exponentially expanding BRAHMA AI's total addressable market which is currently expected to exceed \$130 billion by 2030. Together, we are co-innovating on next-generation AI technologies and bringing them to global enterprises through a joint go-to-market approach that combines BRAHMA AI's Hollywood-grade AI with Google Cloud's infrastructure and reach."
